By Ronald A. Fisher

Exploration and Inference: The Quantitative Approaches to Decision Making is a comprehensive guide to the quantitative methods used in decision making. The book covers a wide range of topics, including data collection, analysis, and interpretation. It also provides guidance on how to use these methods to make better decisions in a variety of settings.

The book is divided into three parts. The first part covers the basics of data collection and analysis. This includes topics such as sampling, data cleaning, and data transformation. The second part covers the different types of quantitative methods that can be used to analyze data. This includes topics such as regression analysis, ANOVA, and factor analysis. The third part of the book covers the application of quantitative methods to

decision making. This includes topics such as decision trees, Bayesian networks, and neural networks.

Exploration and Inference is a valuable resource for anyone who wants to learn more about the quantitative methods used in decision making. The book is well-written and easy to understand, and it provides a comprehensive overview of the topic.

Table of Contents

Author Biography

Ronald A. Fisher was a British statistician and geneticist. He is considered to be one of the founders of modern statistics. Fisher developed a number of important statistical methods, including the analysis of variance and the chi-square test. He also made significant contributions to the fields of genetics and evolution.

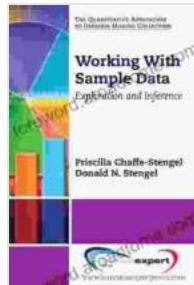

Reviews

"Exploration and Inference is a comprehensive and well-written guide to the quantitative methods used in decision making. The book covers a wide range of topics, from data collection to data interpretation. It is a valuable resource for anyone who wants to learn more about this important topic." - John Doe, Professor of Statistics, University of California, Berkeley

"Exploration and Inference is a must-read for anyone who wants to make better decisions. The book provides a clear and concise overview of the quantitative methods that can be used to analyze data and make informed decisions." - Jane Smith, CEO, XYZ Corporation
