

Extreme Hurricanes and Tornadoes: When Nature Attacks

Hurricanes and tornadoes are two of nature's most powerful forces. They can cause widespread destruction and loss of life. In this book, you will learn about the science behind these natural disasters and how to prepare for their impact.

Hurricanes

Hurricanes are tropical cyclones that form over warm ocean waters. They are characterized by their strong winds, heavy rain, and storm surge. Hurricanes can cause extensive damage to coastal areas, including flooding, wind damage, and power outages.

The Saffir-Simpson Hurricane Wind Scale is used to classify hurricanes based on their wind speed. The scale ranges from Category 1 to Category 5, with Category 5 hurricanes being the most powerful. The stronger a hurricane is, the more damage it is likely to cause.

Hurricanes can form anywhere in the world, but they are most common in the Atlantic and Pacific Oceans. The Atlantic hurricane season runs from June 1st to November 30th, while the Pacific hurricane season runs from May 15th to November 30th.

Tornadoes

Tornadoes are violently rotating columns of air that extend from the base of a thunderstorm cloud to the ground. They are characterized by their high winds, which can reach speeds of up to 300 miles per hour. Tornadoes can cause extensive damage to buildings, infrastructure, and crops.

Tornadoes can occur anywhere in the world, but they are most common in the Great Plains of the United States. The tornado season in the United States runs from March to June, but tornadoes can occur at any time of year.

Preparation

There are a number of things you can do to prepare for hurricanes and tornadoes.

- **Stay informed about weather forecasts.** The National Hurricane Center and the National Weather Service provide up-to-date information on hurricanes and tornadoes.
- **Have a plan for evacuation.** If you live in an area that is prone to hurricanes or tornadoes, it is important to have a plan for evacuation. Know where you will go and how you will get there.
- **Stock up on supplies.** In the event of a hurricane or tornado, you may lose power and water for several days. It is important to have a supply

of food, water, and other essential items.

- **Secure your property.** Before a hurricane or tornado strikes, take steps to secure your property. This includes boarding up windows, securing loose objects, and trimming trees.

Hurricanes and tornadoes are powerful and destructive forces of nature. However, by taking steps to prepare, you can reduce your risk of injury or damage.
