Harvesting, the culmination of the viticultural cycle, is a critical stage that requires careful timing and skilled hands. Grapes are meticulously handpicked or mechanically harvested, depending on the desired style and quality of the wine. The harvested grapes are then transported to the winery, where the winemaking process begins in earnest.

The winemaking process involves a series of complex transformations that convert grape juice into wine. Fermentation, the cornerstone of winemaking, is a natural process where yeast converts grape sugars into alcohol and carbon dioxide. Winemakers closely monitor fermentation to control the wine's flavor profile, alcohol content, and sweetness.

After fermentation, the young wine undergoes aging, a period of controlled maturation in barrels or tanks. During aging, the wine interacts with the wood or stainless steel, acquiring depth, complexity, and structure. The length of aging varies depending on the desired style and the winemaker's artistic vision.
